

Exodontia & Perio Surgery Instruments

Section Two of Cislak's Catalog will detail the Exodontia & Perio Surgery Instruments. By far the largest section of our catalog you will see that Cislak has been busy making instruments to tackle any surgery large or small. Highlights are Cislak's feline specialty instruments and our new Winged elevators!

Elevator Handle Choices

All Cislak elevators come standard in our #501 all stainless steel elevator handle. However we know that people have different size hands. So we have four choices of handle sizes for our elevators. If you order for example an EX-4 it will come standard in the #501 handle, but if you want the smaller handle choices (the #503 shorter elevator handle or the RTH2 root tip handle) or the larger #505 handle just specify either one of these and we make it to order for you! There is an additional charge for the #505 handle.

Elevators come standard in #501 Handle. Ask for #503 Handle for smaller handle or #505 for largest handle. RTH2 can also be ordered if desired.

#501 Standard Handle

#503 Smaller Handle

#505 Largest Handle

Cislak Basic Exodontia Set-up (Order # EX-100)

The Basic Exodontia Set-Up Has The Basic Instruments Needed For Extraction In A Variety Of Animals. Many Practitioners Will Use This Kit As A Starting Point And Then Add On Some More Species Specific Instruments (For Example More Feline Sized Instruments).

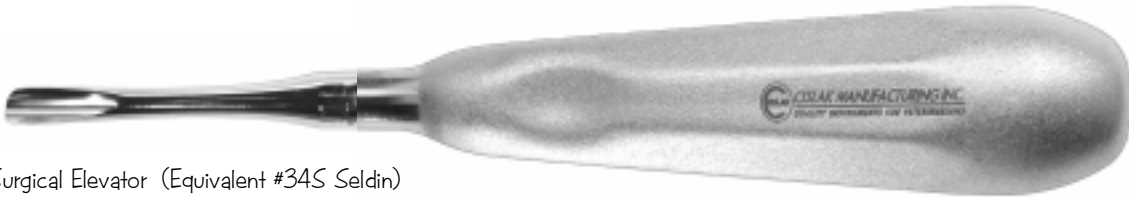

EX-1 Periosteal (Equivalent #9 Molt)
Used For Flap Procedures & To Break The Epitheat Attachment Prior To Elevation

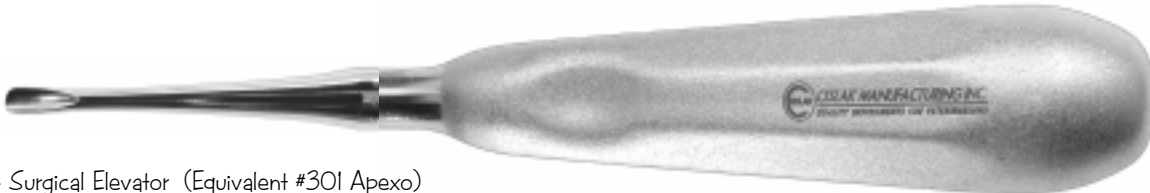

EX-2 Surgical Curette (Equivalent #10 Miller)
Used After Extraction To Clean Out The Socket & For Minor Bone Correction

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

EX-3 Surgical Elevator (Equivalent #34S Seldin)
Large Size Elevator Used To "Elevate" Tooth Out Of Socket

EX-4 Surgical Elevator (Equivalent #30I Apexo)
Medium Size Elevator Used To "Elevate" Tooth Out Of Socket

EX-23 Extraction Forcep Economy
(Equivalent #32A Parmlly)
Large Body, Finer Tip Extraction Forcep
Used To Remove The Tooth After Elevation

PLEASE NOTE ALL INSTRUMENTS FROM CISLAK KITS CAN BE PURCHASED INDIVIDUALLY.

Cislak Luxating Type Elevators

Luxating Type Elevators are made with a thinner sharper blade than traditional elevators. This means that the instrument can be used in a circular cutting motion to separate the tooth from surrounding bone and to cut the periodontal ligament to ease extraction. Due to the thin nature of these instruments they should not be used in a prying motion like traditional elevators.

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

LT-3CA
Side View

The "LT-TO" series are three instruments that combine Luxating Type Elevators and Periotomes into one instrument!

The "LT-TO" series should only be used in a luxation and cutting motion. Never pry like an elevator with these!

LT-3CA Luxating Elevator
3mm Wide Blade Inside-Bent

LT-TO3 Luxating Elevator
3mm Wide Blade Straight

LT-TO4 Luxating Elevator
4mm Wide Blade Straight

LT-TO5 Luxating Elevator
5mm Wide Blade Straight

Cislak's Inside-Bend Luxating Type Elevator Set (Order # EX-III)

Luxating Type Elevators are made with a thinner sharper blade than traditional elevators. This means that the instrument can be used in a circular cutting motion to separate the tooth from surrounding bone and to cut the periodontal ligament to ease extraction. Due to the thin nature of these instruments they should not be used in a prying motion like traditional elevators. The EX-III Kit contains four Luxating Inside-Curved Type Elevators in sizes of 2mm, 3mm, 4.5mm and 5mm. As with all Cislak kits there is a built in 10% discount though one can purchase each instrument separately as well.

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

Cislak's "XS" Extra-Short Luxating Type Elevator Set (Order # EX-112)

Luxating Type Elevators are made with a thinner sharper blade than traditional elevators. This means that the instrument can be used in a circular cutting motion to separate the tooth from surrounding bone and to cut the periodontal ligament to ease extraction. Due to the thin nature of these instruments they should not be used in a prying motion like traditional elevators. The EX-112 Kit contains 12 Luxating Type Elevators made with shorter shanks and our smaller #503 handle for smaller animal mouths. They come in straight, back-curved and inside-curved styles, in sizes of 2mm, 3mm, 4.5mm and 5mm. As with all Cislak kits there is a built in 10% discount though one can purchase each instrument separately as well.

Standard In #503 Handle (Pictured).
Can be orderd in #501 or #505 handle.

As with all Cislak kits there is a built in 10% discount though one can purchase each instrument separately as well.

Standard In #503 Handle (Pictured).
Can be orderd in #501 or #505 handle.

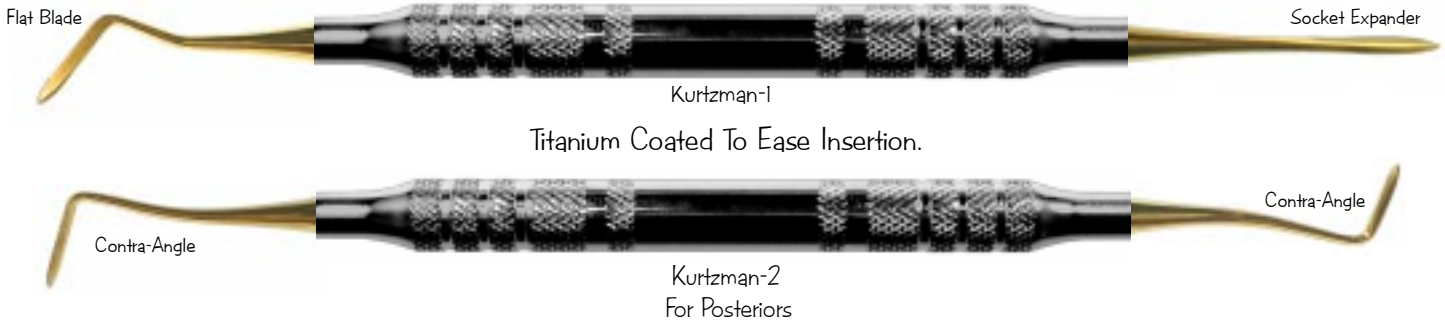

Cislak Periotomes

Periotomes are thin sharp instruments which are used for more atraumatic extractions. Small and sharp they are used to slip in between the tooth and the surrounding tissue and bone. Used in a pushing and cutting motion the periotome cuts the PDL and breaks the epithelial attachment all the way down the tooth to make extractions easier.

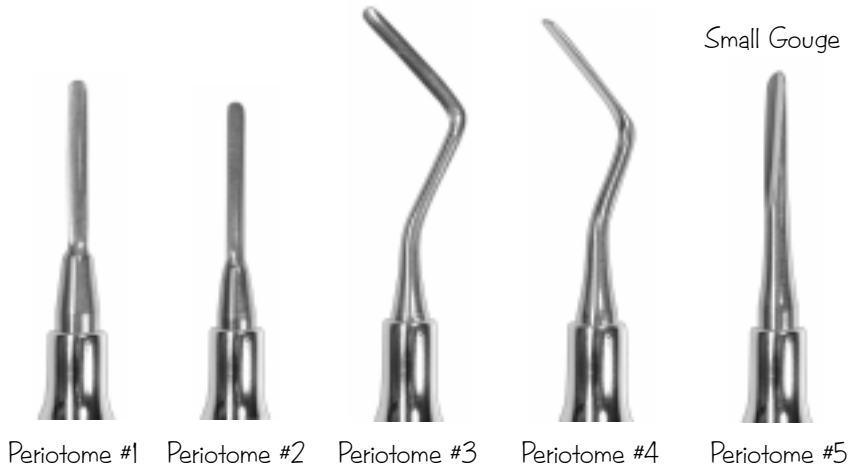

Cislak Kurtzman Periotomes

The Kurtzman Periotomes by Cislak are used to cut the attachment to the tooth during extractions. Far less traumatic than traditional extraction methods Periotomes allow the tooth to exit the bone occlusally thus eliminating the problems caused by lateral movement. The Periotomes also help to lessen root fracture thus making for quicker and less problematic extractions. The Cislak Kurtzman Periotomes are coated with a Titanium coating for long instrument life and for a smoother instrument surface to ease insertion. The Kurtzman Periotomes have a slight flame shape to the head making them easier to insert than traditional blunted periotomes. The Kurtzman Periotomes are in the Featherweight® XL handle and are available either individually or at a discounted price for the set of two. The Kurtzman Periotomes are made entirely in the US.

Cislak Single-Ended Periotomes

Titanium Coated To Ease Insertion.

Our single-ended Periotomes can be purchased in either the CRI19 or RTH8 handle. The CRI19 is for hand use only while the RTH8 can be used either by hand or with a mallet!

Cislak Periotomes

Our single-ended Periotomes can also be purchased in a kit along with a stainless steel holder to keep the instruments together during cleaning, sterilization and storage!

Cislak's Original Feline Elevator Kit (Order # EX-101)

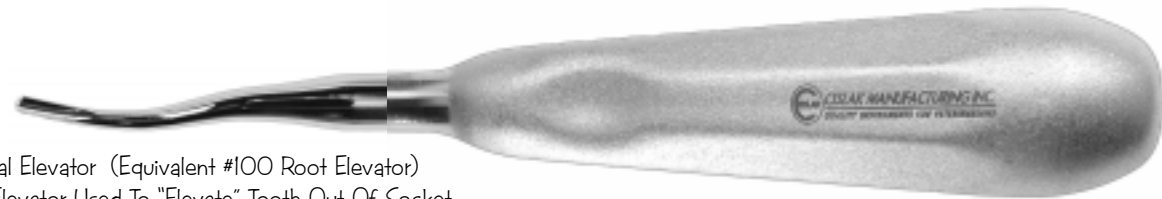

The Feline Elevator Kit Contains Six Popular Elevator Patterns Useful In Extracting Feline Teeth.

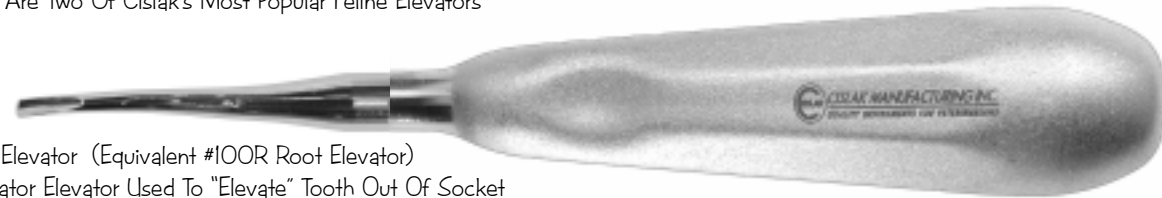

EX-12 Surgical Elevator (Equivalent #46)
Medium Size Curved Elevator Used To "Elevate" Tooth Out

EX-14 Surgical Elevator (Equivalent Howard I)
Pointed Elevator Used To "Elevate" Tooth Out Of Socket
The EX-14 Is Also Helpful With Larger Root Tips

EX-15 Surgical Elevator (Equivalent #100 Root Elevator)
Inside Curved Elevator Used To "Elevate" Tooth Out Of Socket
Blade Has One Serrated Edge For Grip & Chisel Edge
The EX15 & EX16 Are Two Of Cislak's Most Popular Feline Elevators

EX-16 Surgical Elevator (Equivalent #100R Root Elevator)
Outside Curved Elevator Elevator Used To "Elevate" Tooth Out Of Socket
Blade Has One Serrated Edge For Grip & Chisel Edge
The EX15 & EX16 Are Two Of Cislak's Most Popular Feline Elevators

EX-17 Surgical Elevator (Equivalent #44 Cryer)
"Flag" Style Elevator Used To "Elevate" Section Of Tooth When Multi Sectioning Molars

EX-18 Surgical Elevator (Equivalent #45 Cryer)
"Flag" Style Elevator Used To "Elevate" Section Of Tooth When Multi Sectioning Molars

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

Cislak's "Winged" Elevator Kit (Order # EX-103)

Developed by Dr. Wiggs DVM of Dallas, TX The Winged Elevators are the newest design in extraction instruments. Winged elevators can be used to cover most extraction procedures. The elevator is used with a steady gentle rotational pressure for 10 to 30 seconds to fatigue the periodontal ligament and cause hemorrhage amongst its fibers. As the space allows, the elevator is pressed further apically along the tooth, using a slow twisting action on the instrument. Excess force should not be necessary if correct technique is used. Cradling the jaw with the opposite hand and holding the elevator down on the shaft to prevent slippage are important considerations, especially with bone structure of questionable stability that could fracture. The Winged elevators should not be used in a levered action since their function is to sever the ligament by sliding around the root. Once the tooth becomes loose, the elevator can be pressed to the bottom of the alveolus with leverage to remove the tooth!

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

Cislak's Holmstrom Modified Elevator Set (Order # H-100)

Developed by Dr. Holmstrom DVM the Holmstrom modification is designed to make elevators more effective when working with single-rooted teeth. Traditional elevators having a rounded toe or chisel edge can slip off to one side or the other of the rounded surface of a single-rooted tooth. The Holmstrom modification puts a notch in the end of the elevator to cradle the tooth root thus avoiding slippage that can have severe consequences.

Standard In #501 Handle (Pictured). Ask for #503 Handle For Smaller Handle or #505 For Largest Handle.

Cislak's Leopold Mouth Gags

The Leopold Mouth Gags were developed in conjunction with Seymour Leopold DVM of Southbury, CT. Dr. Leopold developed the mouth gag after being frustrated by the lack of a quality working mouth gag in the industry. Traditional mouth gags rest precariously against only the canine tooth and run the risk of damaging the tooth. Traditional gags also continuously slip out and pressure placed on the gag causes them to close. The patented Leopold design (pat pending) has eliminated these (and many other) risks. The soft rubber jaws engage a number of teeth and offer nonslip performance. The thumb screws allow the mouth to be positioned and then the gag to be locked into place. Also the overall design allows for the gag to work in animals that have lost their canine teeth as well as animals with these teeth intact. The Leopold Mouth Gags are entirely made in the US of US materials. They have a lifetime warranty of all parts (repair or replacement) with the exception of the rubber pads which can be replaced for a minimum of cost. The Leopold Mouth Gags do one thing, quite simply they work! Leopold Mouth Gags come in three sizes small, medium and large.

Recommended For Dogs 40 pounds and up.

Recommended For Dogs 20 to 30 pounds

Leopold Mouth-Gag Medium
(LEOGM)

Leopold Mouth-Gag Large
(LEOGL)

Recommended For Cats & Toy Breeds

Leopold Mouth-Gag Small
(LEOGS)

Leopold Mouth Gags can be purchased singly, in pairs or in a complete set of three. There are discounts for paired or set purchases.

- (1.) **Loosen thumbscrews on gag.**
- (2.) **Compress upper and lower jaws.**
- (3.) **Place lower rubber jaw against pre-molars totally flat.**
- (4.) **Repeat procedure with upper rubber jaw.**
- (5.) **Both rubber jaws should now have good contact against crowns of teeth**
- (6.) **Fully extended gag so spring puts tension against teeth**
- (7.) **Tighten thumbscrews to lock gag in place.**
